## OPTIMIZE

ColorAnt is an easy-to-use tool that corrects and optimizes measurement data. The features include the ability to edit primary colors, substrate color and recalculate measurement data with the use of full sized test charts.

### KEY FEATURES

- » Data analysis and reporting
- » Automatic data correction
- » Chart generation
- » Test chart measuring
- » Edit primaries
- » Optical brightener correction

## PROFILE

CoPrA is your control center for any profiling task. CoPrA creates high quality ICC profiles with a user friendly interface. CoPrA can create Printer, DeviceLink and SaveInk profiles with Multicolor options for day-to-day color management challenges.

### KEY FEATURES

- » Printer profiles
- » DeviceLink profiles
- » Visual DeviceLink editing
- » Ink saving profiles
- » Profile Management and Analysis
- » Multicolor profiles

## AUTOMATE

ZePrA color management server can be integrated into an existing workflow for immediate results. The easy-to-use interface with Auto Setup feature simplifies the process of creating custom DeviceLinks for any workflow situation.

### KEY FEATURES

- » Wizard driven interface
- » SmartLink technology
- » Advanced spot color conversion
- » Transparency flattening
- » Ink Saving and TAC reduction
- » Precise Proofing for spot colors

## STANDARDIZE

ColorLogic's DeviceLink sets provides manually optimized profiles for international printing standards. These profiles contain common color transformations, as well as TAC reduction and Ink Saving profiles.

### STANDARD SETS

- |                      |            |
|----------------------|------------|
| » Sheetfed           | » Gravure  |
| » Heatset            | » Basic    |
| » Japanese standards | » Expert   |
| » Newsprint          | » Standard |
| » RGB to CMYK        |            |
